Summary

Software Engineer at Apptmyz building the backend of a B2B logistics SaaS platform — **Spring Boot**, Java, PostgreSQL and Redis behind workflows processing **10K+ transactions daily**. Strongest on the performance side: **1.8s → 600ms** API latency, **38%** lower peak CPU, **1100+ LeetCode** problems at a **1800+ rating**. Ships RAG/LLM features to production where they genuinely help — the core work is systems.

Technical Skills

- **Languages:** Java, Python, JavaScript, TypeScript, SQL
- **Backend:** Spring Boot, REST API Development, FastAPI, Express.js, Hibernate/JPA, Redis
- **Databases:** PostgreSQL, MySQL, MongoDB, query optimization, indexing, caching, pagination
- **Distributed Systems:** Microservices, event-driven architecture, WebSockets, concurrency, real-time systems, scalability
- **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Linux
- **Frontend:** Angular, React, TypeScript, RxJS
- **AI & LLM:** RAG, LangChain, FAISS, SentenceTransformers, Scikit-learn
- **Core CS:** Data Structures & Algorithms, System Design, OOP, Operating Systems, Computer Networks

Experience

- **Software Engineer (SDE-1)** - Apptmyz — June 2026 – Present
  - Own end-to-end delivery of logistics modules on **Spring Boot, Angular, PostgreSQL and Redis — 10K+ transactions/day**.
  - Cut API latency **1.8s → 600ms** and raised throughput **45%** via targeted indexing, pagination and Redis caching.
  - Engineered real-time dispatch tracking over **WebSockets** with async processing, giving ops live delivery status.
  - Reduced peak CPU **38%** under load testing through batched writes, tuned SQL execution plans and profiled slow paths.
- **Software Engineer Intern** - Apptmyz — June 2025 – May 2026
  - Built **Spring Boot REST APIs** over PostgreSQL for core logistics workflows, sustaining **99.9% uptime** in production.
  - Cut API response times **40%** by adding caching and rewriting the expensive queries behind the slowest endpoints.
  - Improved **Angular** page load time **35%** on customer-facing modules; debugged production incidents with senior engineers.
  - Shipped a hybrid **RAG + rule-based chatbot** into enterprise workflows — retrieval for answers, rules for critical paths.
  - Maintained **Docker-based CI/CD pipelines** deploying to AWS, and took features through code review and testing in Agile sprints.

Projects

- **Shortify — URL Shortening Service** — *Spring Boot (Java 21), Angular, PostgreSQL, JPA/Hibernate* **Link**
  Built a Bitly-style shortener end-to-end — collision-safe code generation, link expiry and per-link click analytics behind a **Spring Boot REST API**, with JPA/Hibernate and **HikariCP connection pooling** tuning the persistence layer and an Angular dashboard on top.
- **Review Insight and Summarizer** — *React.js, Express.js, MongoDB, Flask, Llama 3.1, FAISS, RAG* **Link**
  Grounds **Llama-3.1 in FAISS vector retrieval** to summarize e-commerce reviews, lifting factual accuracy **30%** over the ungrounded baseline; backend built on secure REST APIs with **OAuth authentication, rate limiting** and an automated scraping pipeline.
- **JobLens AI** — *React.js, FastAPI, Supabase, Scikit-learn, SentenceTransformers, Groq LLM* **Link**
  Detects **fraudulent job postings** and scores **resume-job fit** by pairing a logistic-regression classifier with SentenceTransformers embeddings and a Groq LLM explanation layer, served through **FastAPI** to a Supabase-authenticated React dashboard.

Achievements and Certifications

- Solved **1100+ LeetCode** problems at a **1800+ contest rating (Top 8%)**, spanning dynamic programming, graphs and trees.
- Ranked in the **top 0.5%** academically with a CGPA of **9.0**.
- Selected Trainee for **Amazon ML Summer School**, covering advanced ML, transformers and real-world automation systems.
- IIT Madras — Silver (Python), Gold (Deep Learning); IIT Kharagpur — Silver (Cloud Computing).

Education

Keshav Memorial Institute of Technology — Nov. 2022 – May 2026
Bachelor of Technology in Information Technology — CGPA: 9.00
